

Please observe the following notes on changing images for ILUTEX frame, ILUTEX light, ILUTEX wall and ILUTEX stele

- The ILUTEX systems use a so-called Keder profile frame for easy image change, in whose Keder groove a backlit textile with corresponding Keder fabrication is clamped.
- You can change the image on the wall, on the system or, if necessary, on a flat surface. To do this, pull the previous Backlit out of the frame with a blunt, narrow object, first at one corner and then completely.
- Then place the new Backlit on the frame and stuff it into the frame with the piping at two corners to clamp it tightly all around, piece by piece.
- If this should be relatively difficult, e.g. because the fabric is tight, it is advisable to pull on the fabric in the running direction and, if necessary, use a blunt, narrow object (e.g. a screwdriver) to press the material in.
- The result is correct when the textile appears taut and wrinkle-free over the frame.

Please do not hesitate to contact us if you have any questions.

Good luck with the image change!
